

Slide 1 — Airport Challenge

Passenger Experience	Retail Engagement	Revenue Challenge
• Travelers struggle to locate gates, baggage claims, lounges and facilities. • Static signage can be difficult to follow in a large, complex terminal. • Passengers frequently depend on staff for routine directions.	• Passengers may not know where restaurants, lounges and duty-free stores are located. • Retail promotions are not always delivered at the right place or time. • Limited interaction means missed opportunities for retailers.	• High-footfall and unused spaces can be converted into digital advertising inventory. • Traditional advertising provides less flexibility for real-time content changes and measurement.

Business Need: Improve passenger flow + increase retail discovery + monetize unused spaces

Slide 2 — Why VirtuBox?

VirtuKiosk • Interactive touchscreen kiosk platform • Self-service information and navigation • Interactive maps and point-of-interest discovery • Remote content management and analytics • Multilingual and accessibility support	VirtuSignage • Digital signage and advertising platform • Dynamic multimedia content • Scheduled content • Centralized management • Analytics and audience engagement	Hardware & Differentiator • Extensa, Directa, Compacta, Exteria and vEdge hardware options • One ecosystem → Hardware + Software + Content + Management + Analytics • Scalable digital experience rather than disconnected information screens.
--	--	---

VirtuBox combines software, hardware and digital experience capabilities for a unified airport solution.

Slide 3 — Proposed Airport Solution

1. Smart Wayfinding Kiosks • Deploy at terminal entrances, check-in, security, intersections, baggage claim and gate zones. • Search Destination → Interactive Map → Route Guidance → Nearby Services • Locate gates, baggage claim, lounges, washrooms, restaurants, duty-free, retail and help points.	2. Digital Advertising Network • Install displays in arrival/departure halls, waiting areas, retail zones, gate areas and unused high-footfall spaces. • Proposed pilot content mix: 40% airport information 40% retail promotions 20% paid advertising.	3. Connect Navigation + Commerce • Example: Passenger searches “Gate A24” → receives route → sees “Duty-Free Offer near A24” → visits retailer. • Turns wayfinding into a commercial engagement opportunity.
--	--	--

Goal: Make every passenger interaction useful, measurable and commercially valuable.

Slide 4 — Operational Efficiency Impact

Current Challenge	VirtuBox Approach	Expected Impact / KPIs
• Routine direction requests • Static information • Difficulty finding facilities • Limited multilingual assistance • Manual content changes • Unused display spaces	• Interactive self-service wayfinding • Dynamic digital content • Searchable POIs and maps • Multilingual interfaces • Centralized remote management • Digital advertising network	• Fewer routine navigation queries • Faster information updates • Faster destination discovery • Better accessibility • Lower maintenance effort • New revenue opportunity • Track: search time, desk queries, kiosk interactions, satisfaction, promotion views, QR scans, uptime and revenue.

Shift from staff-dependent assistance to self-service while creating measurable passenger and commercial data.

Slide 5 — ROI & Business Case

Three Sources of Value • Operational Savings: fewer routine enquiries, reduced information-desk dependency, centralized content management. • Retail Revenue: better visibility of restaurants/duty-free, contextual promotions, QR offers and measurable engagement. • Advertising Revenue: monetize screens, sell inventory by location/time/campaign and measure interactions.	Illustrative Pilot ROI • Assumptions — not VirtuBox-reported figures: • ■10 lakh/year advertising revenue • ■5 lakh/year incremental retail/promotional value • ■5 lakh/year operational savings • Total annual benefit = ■20 lakh • Annualized pilot cost = ■12 lakh • Estimated annual ROI = 66.7%	Scale Decision & Closing • Scale if pilot demonstrates: ↑ passenger satisfaction, ↓ routine assistance workload, ↑ retail engagement, ↑ advertising revenue and measurable ROI. • Final message: VirtuBox transforms airport wayfinding from a navigation service into a connected passenger-experience and revenue platform.
---	--	---

Important: Actual ROI depends on passenger volume, screen inventory, advertiser rates, retailer conversion and deployment cost.
